

Since the time the Book "Psychic Discoveries Behind the Iron Curtain" appeared in 1970, written by Ostrander, I and Schroeder, L there has been a great deal of interest and a lot of fascinating Research carried out in American and European Universities by well known scientists with what is popularly known as Kirlian Photography or photography of the "Aura" or Scientifically termed as "Electrophotography" or "Electrono-photography" though the technique had been developed as early as 1777. Some of the leading personalities abroad in this field today are:

1. I.F. Dumitrescu - Romania
2. Victor Adamenko - Moscow
3. Thelma Moss U.C.L.A., California, U.S.A.
4. Stanley Krippner, Seybrooke, San Francisco, U.S.A.
5. Douglas Dean, Princeton, U.S.A.
6. Dr. Benjamin Shaffiroff, New York, U.S.A.
7. William Tiller, Stanford Univ, California, U.S.A.
8. J.J. Williamson, President of Metaphysical Research Group, U.K.
9. Eric Iginburgs, Munich, West Germany.

An "International Kirlian Research Association" has been established in Brooklyn, New York with Dr. Benjamin G. Shaffiroff M.D., as President with the aim of advancing Research on Kirlian Photography (Electrography) through multidisciplinary research of electro-magnetic interactions in biological and medical functions (Kirlian photography is derived from the name of its promoter Semyon Kirlian a Russian Electrical Engineer, who developed and directed mass interest in this technique of photographing objects without the use of cameras through a low voltage, high frequency electrical discharge.

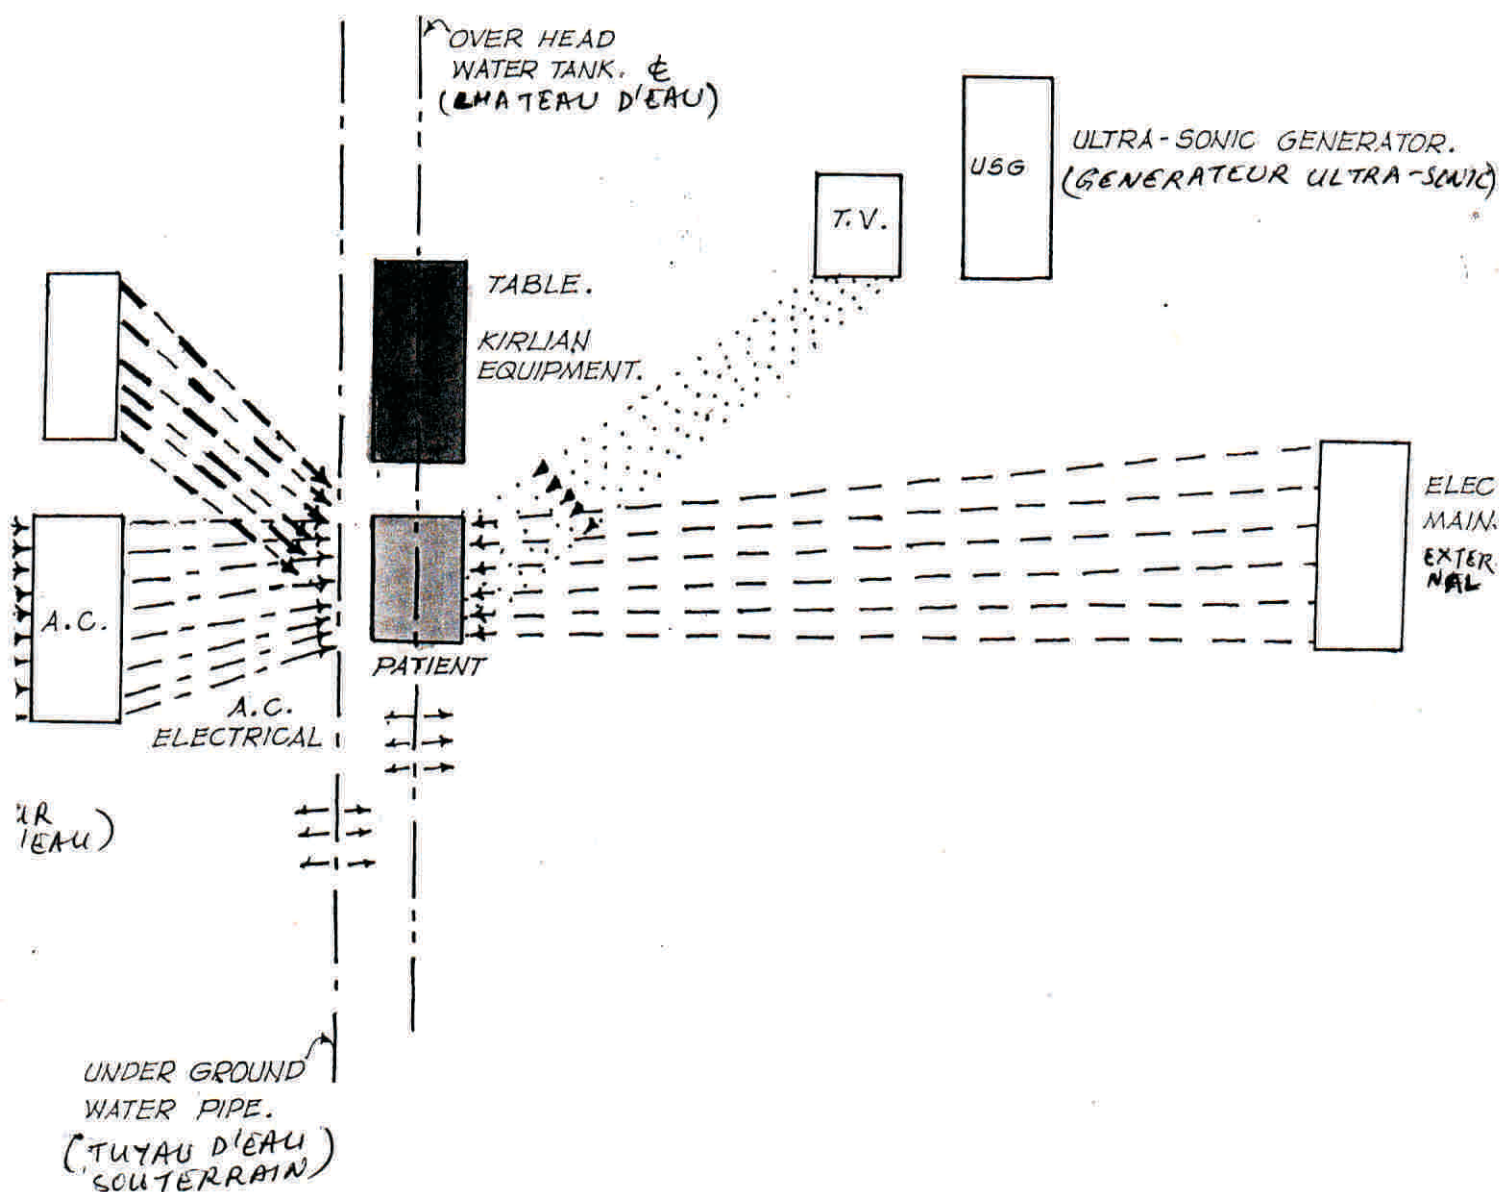

In India this science has been introduced rather recently, and since a few years a Bioelectrography research cell has been operating in the Department of Obstetrics & Gynaecology at the Jawaharlal Institute of Post-Graduate Medical Educational Research (JIPMER) at Pondicherry in South India under the teamship of medical Drs. Rajaram & R.S. Chouhan. The equipment is developed

and built personally by Dr. R.S. Chouhan. His research work has been recognised by the Indian Council of Medical Research and Dr. Chouhan has been given a grant of Rs. 8 lakhs in 1986, for 3 years, for carrying out new research in the field of Cancer Detection and Infertility cases with the help of Electrophotography. His work has been very impressive and Internationally acclaimed resulting in a training and exchange programmes with various countries of the Western & Eastern blocs.

For the first time in a joint collaboration, we have used the Kirlian or "Electrophotography" Equipment to show the existence of negative Bio-energy fields and how they effect the individuals, and when neutralised how the health of the people improve. This was done in the following manner. A series of photographs of the Aura of an individual (only one finger is sufficient) were taken before neutralising i.e. in the existing situation (photo 1) and then during and after neutralisation.

- 1) Electrophotograph of a finger of the person was taken everytime a negative Bio-energy field was neutralised to see the changes or effect on the Aura until all the major negative Bio-energy fields were neutralised (Photographs 2 to 8) - Table. 1.
- 2) Once the major negative Bio energy fields were neutralised, various above identified Bioenergy fields (keeping the rest neutralised) were activated so that at any one time, only one negative Bioenergy vector acted in the environment and upon the person, and we thus photographed the changes occurring in the Aura of the person, (same one finger), which resulted in the changes and definite patterns being observed relating to specific Bioenergy fields (photographs 9 to 16) Table 2.

Two more photographs are added (photos 17 & 18) showing photographs taken of another person taken a few days before the room was neutralised, and taken after the room was neutralised. The following are the results of the above experiments and our comments and conclusions. A layout of the Bioenergy fields positions in the room concerned, is drawn out for a better understanding.

ROOM LAY OUT.

The Aura of a person as photographed by the Electrography system is a field force described in the Vedic literature as "Pranamaya Kosh", by the Western occults as the Aura or the "Etheric Body" and in modern time by Physicists as an "Ionic charged layer surrounding the living substance". Under normal circumstances in all negative energy free zones this aura takes an even distribution consisting of a cloudlike inert zone and a filamentous outer zone termed as "Streamers." This is especially so when the physiology and the psychology is well within the normal limits. The changes in the Auric field may be interpreted to also show the body's self balancing mechanism under external/internal stress reflected in an increase or decrease in the baseline level of the Corona and the Streamer lengths.

Fig. 1!

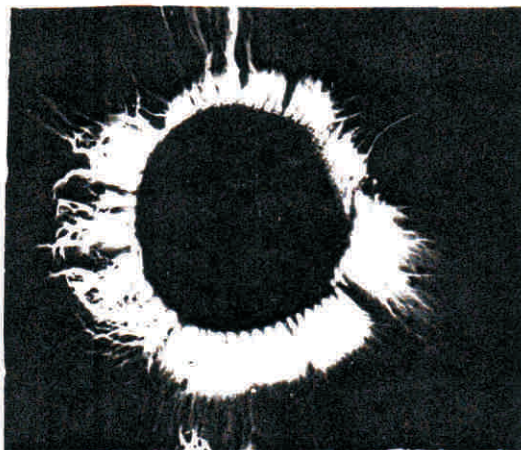

Fig. 2 !

A normal healthy individual - 22 yrs of age. The first picture shows, a coronal pattern which is irregular, marked by uneven distribution and criss crossing of the streamer pattern though the streamer bases are clearly discernable. Breaks in the corona are indicative of various axis of negative energy fields effecting the person.

The same individual recorded after

Fig. 2

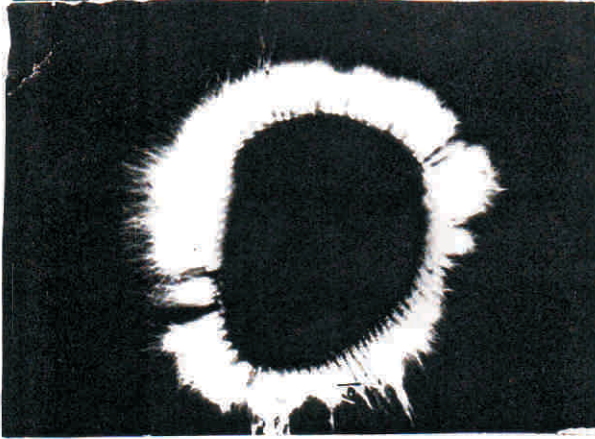

Fig. 3

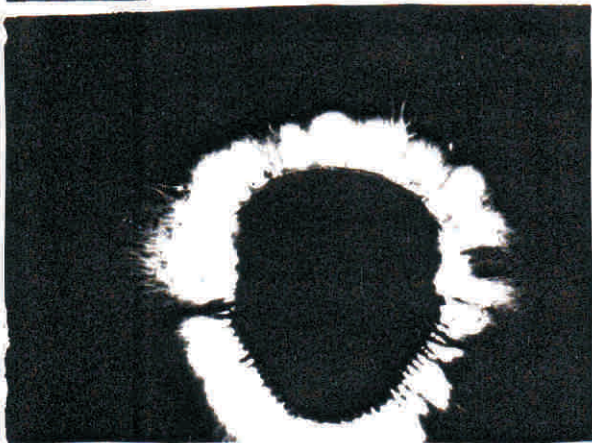

Fig. 4

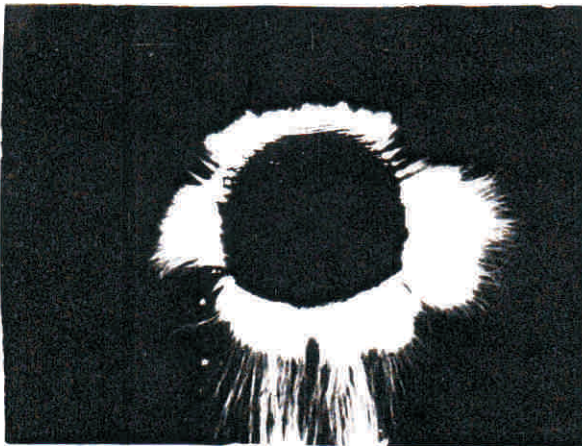

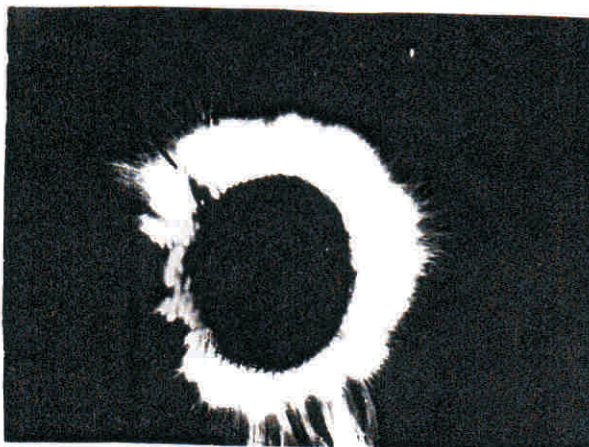

Fig. 5

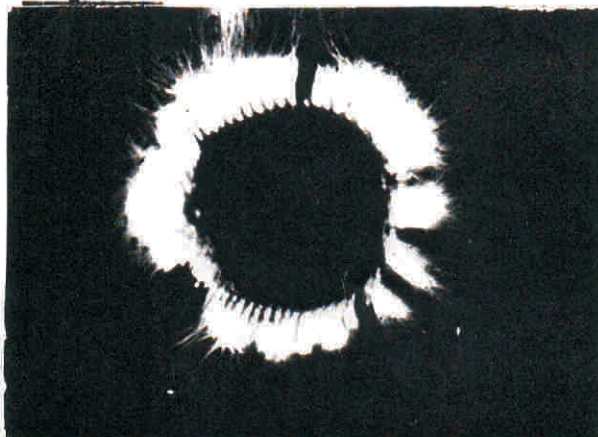

the underground Water Pipe Line vector has been neutralised, which shows clipping of the streamers in areas where they were abnormally long. A compression effect on the corona is seen.

A.C. Electrical Vector when neutralised produced more even distribution of the aura and also smoothing out of areas of excessive energy (cloudy concentrations) compression effect is still seen exactly in the main line of the Electrical vector, where there are still some criss-crossings of the streamers.

As soon as External Electrical Vector is neutralised, the overall corona takes an even shape but the effect of the Electrode Plate Vector has been enhanced, resulting in lengthening of the streamers in the vectoral axis.

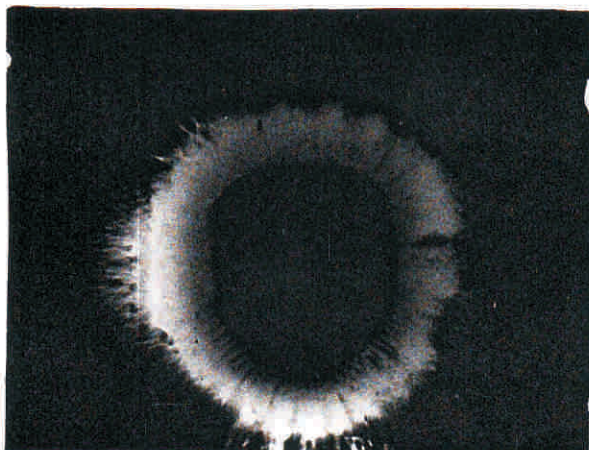

When the Electrode Plate Vector is neutralised it once again brings out an even distribution in the Coronal pattern except in the axis of the A.C. Water Trough Vector.

Fig. 6 :

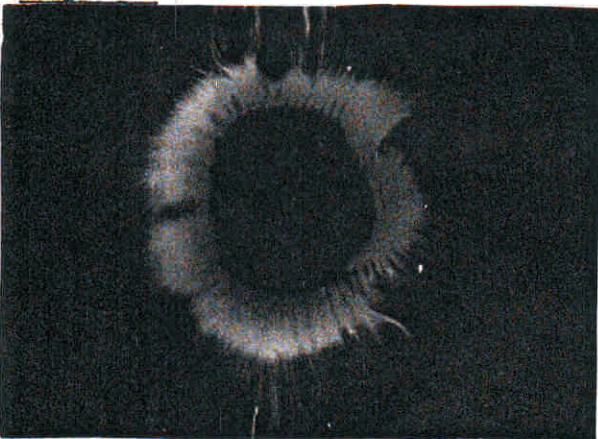

After A.C. Water Trough Vector is neutralised note the more even coronal distribution. The breaks in the corona reflect other active negative vectors.

Fig. 7 :

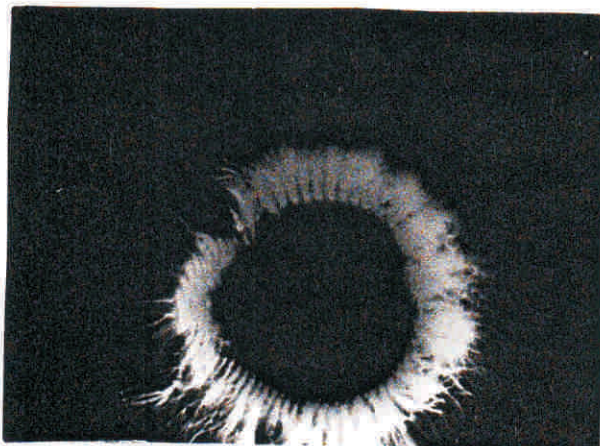

As soon as the Overhead Water Tank vector is neutralised the Corona pattern takes an even distribution, specially note the decrease in the elongated Streamer zones and also the decrease in the breaks.

Fig. 8 :

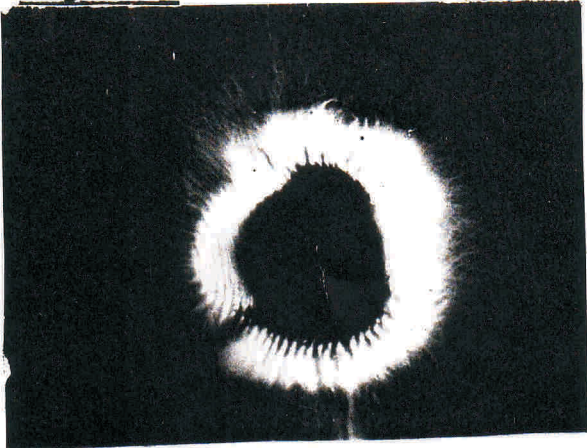

When the T.V. Vector has been neutralised, the absence of all other fields resulted in a pattern ~~xx xhx~~ where there is least resistance to the vectoral activity. However the Coronal distribution can be noticed without any gaps.

Fig. 9 :

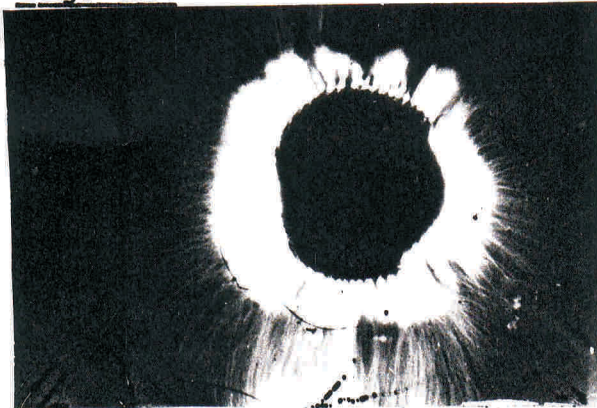

All Vectors Neutralised produces a pattern with even distribution of Streamers as well as cloud activity. This picture now reflects on the true internal milieu of the person without his system having to react to external disturbances.

Fig. 10 :

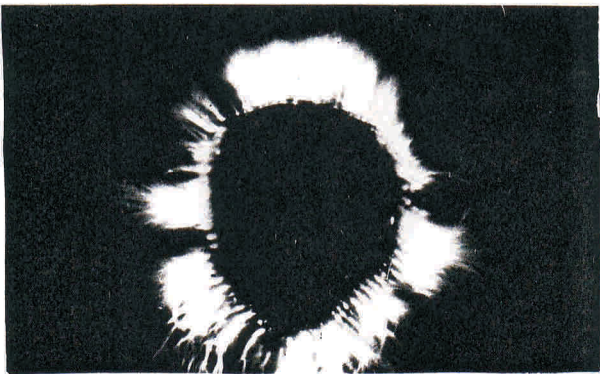

Reactivation of the Overhead Water Tank Vector only, shows reemergence of long Streamers, also note the compression or in line activity along the axis. There is an elongation of the Streamers and an excessive energy discharge from the body system to maintain the Coronal regularity.

Fig. 11 :

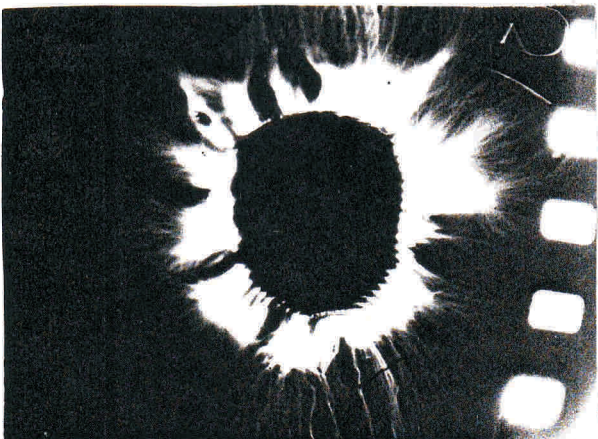

Underground Pipe Line Water Vector activated, note the attenuation of the effect - increased Streamer lengths because of a powerful negative external field.

Fig. 12 :

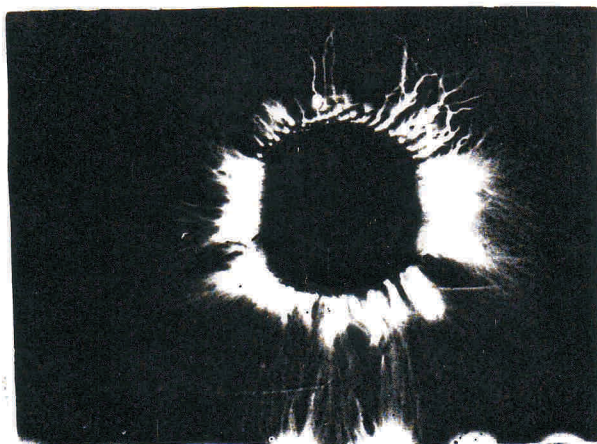

Activation of Electrical Mains Vector results in a drastic clipping or cut down of the Corona as well as increase in the gaps which reflect negative electrical fields active from all sides.

Fig. 13 :

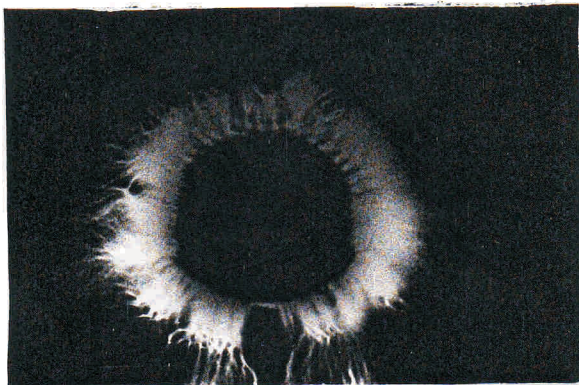

A.C. Electrical Vector activated, ~~note~~ note the increase in the Coronal gaps and compensatory closure by the Streamers.

Fig. 14:

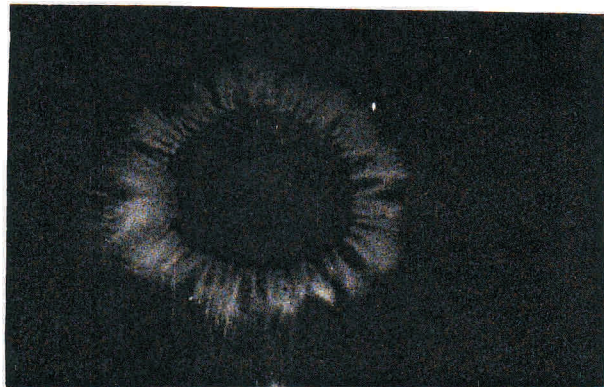

External Electrical Vector activated
Note the reduction in the overall
Coronal activity and increase in
the criss-crossing of streamers.
(the interpretation of criss-crossing
of Streamers due to external physical
factors is still not possible,
though psychological interpretation
is ambiguity and undecisiveness in
the nature of the person)

Fig. 15:

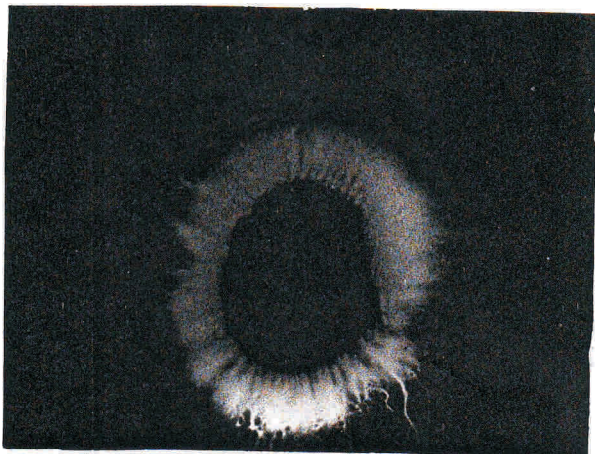

T.V. Vector activated. Note the
breakage in the Corona in line of
the Vector.

Fig. 16:

All Vectors Neutralised producing
an even Coronal distribution,
complete with clouds and Streamers
Again this Gives a true picture
of the inner condition of the person.

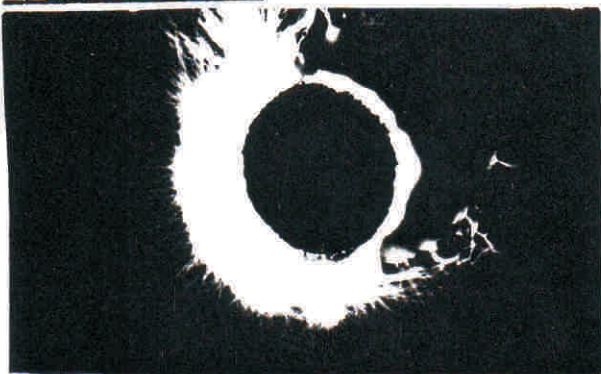

Fig. 17:

Ultra Sound activated, resulting
in a positive field creation.
Note the overall increase in the
Corona without any abnormal
discharge focus.

Fig. 18 & 19.

18.

19.

These show a person taken a few days before neutralisation of the room, and after neutralisation of external vectors in the same room. Note the closing of the large gaps seen in the earlier picture. The total body energies have not come to a balance (Fig. 18 though the process has been initiated as seen by the Streamers bridging the gaps (Fig. 19)

This shows the Regenerative or Recuperative efforts of the body without any external intervention in terms of medical aid.

Thus it may be concluded that there exist External Negative Energy Fields and they play an important role in effecting the health of the body, when neutralised, the environment allows a spontaneous recuperation by the system involved.

This corroborates in a different way with the earlier works of Scientists such as Cyril Smith, etc. that the technological innovations contribute significantly to the generation of Negative Energy Vectors previously absent in a given environment.

These experiments are also indicative of the following:

- That all External Negative Bioenergy Vectors, identified earlier do not have the same intensity, they have varying degrees of intensity.
- That different types of Bioenergy Negative Fields effect all living organisms, resulting in typical Auric Corona shapes indicative of the specific Bioenergy fields that are active.

Technical Data:

Indu	- 35mm	B & W
Developer	X	
Fixer	X	
	-	KODAK D-10 with fixer

Developing Temp : 20°C

Exposure : 3 sec duration - Voltage
Frequency Y
MODE - B
